Panel 4D — SCLC: B7-H3-high vs B7-H3-low tumour-associated fibroblast compartment (fibroblast-labelled)

CAF_B7H3_high n=86 (7 donors) | CAF_B7H3_low n=158 (9 donors) | LIANA rank_aggregate consensus, 1,000 perms. Filters: top-decile specificity rank (discriminating), p<0.01 and ≥3 methods (both non-discriminating here).
Calls are rank-based differential specificity, not a formal high-vs-low test; the split is CD276-detection-based and depth-dependent (see depth audit).
